Sielox™ Announces Partnership with NuVision.

Core Technologies of Access Control Software and One Card Systems Combine to Extend Value of Each.

Las Vegas, NV (March 28, 2007) – Sielox has announced a partnership with NuVision Networks Corp. (NVN) which will allow a fully integrated and seamless “One Card” solution for patron accounting and physical access control.

“The cooperative partnership between Sielox and NuVision will provide customers with richer functionality and improved efficiencies,” said Karen Evans, Sielox President and General Manager. “NuVision is a clear leader in the one card system marketplace and we are excited to be working with them to couple two very important technologies in the card access arena.”

Sielox’s highly acclaimed Pinnacle™ access control software solution features an open architecture design which provides users with unprecedented levels of scalability, as well as the tools needed to customize a solution for specific needs. Its LANLink™ Controller enables 10/100 Base-T communications with 3DES 168-bit encryption,

DHCP support and web-based diagnostics. Additionally, Pinnacle Integrated Graphical Mapping, available on Pinnacle 6.0, enables any device listed on Pinnacle's device tree to be easily placed on a floor plan for monitoring and control.

When the Pinnacle access control software is integrated with NuVision's iAMECS Advanced One Card system, the two technologies can share the same partitioned SQL Server database for instantaneous information sharing, changes, updates and communication. ID card images, captured by iAMECS Advanced Video Pro technology, can also be linked to the Pinnacle software.

"We were very impressed with Pinnacle's architectural platform, sophisticated functionality and ease of use," said Niles Dally, Vice President of Sales at NVN. "This partnership will help fulfill the demand for single card, integrated solutions in the educational, medical and government fields by providing a seamless technology which spans across functions, geography and devices to improve operations and services."

The multi-application access cards feature technologies for identification, building access, vending, library lending, Internet access, meal plans, banking and even medical information. Cardholder record information, including name, classification, photo and access level among other data, is entered only once into the NuVision software and then is automatically transferred to the Pinnacle access control system.

"Pinnacle access control software and iAMECS Advanced One Card System are a natural fit and the integration of the two mutually extends the value of each," said Ms. Evans. "It's a complete platform designed to optimize and enhance the card user's experience."
