### ***Sielox™ - KapLogic Partnership Brings Powerful Solution To Security Systems Integration.***

*Open Architecture is Key to Seamless Integration.*

Las Vegas, NV (March 28, 2007) – Sielox has announced the integration of their Pinnacle™ access control software with KapLogic's Aegis™ integration software, giving enterprises and system integrators a seamlessly integrated network workstation.

“Addressing the integration of several security subsystems requires software technology which is powerful, scalable and flexible,” said Karen Evans, Sielox President and General Manager. “KapLogic's Aegis software fulfills that requirement and we are pleased to announce the integration of our Pinnacle access control software with Aegis.”

Sielox's highly acclaimed Pinnacle™ access control software solution features an open architecture design which provides users with unprecedented levels of scalability, as well as the tools needed to customize a solution for specific needs. Its LANLink™ Controller enables 10/100 Base-T communications with 3DES 168-bit encryption,

DHCP support and web-based diagnostics. Additionally, Pinnacle Integrated Graphical Mapping, available on Pinnacle 6.0, enables any device listed on Pinnacle's device tree to be easily placed on a floor plan for monitoring and control.

Pinnacle's open architecture design allows the integration with Aegis' modular architecture and the combined technologies offer significant flexibility in system design, distributed processing and scalability. Aegis provides a consistent, simple user interface where all normal functions can be performed as a point-and-click operation.

"Aegis represents the next generation in graphical security integration software with virtually unlimited integration capabilities," said Dick Beard, President, KapLogic. "We believe this partnership will drive our mutual growth and innovation as well as empower our customers to choose the combination of technologies that best serves their purpose."

The Aegis™ software package allows security/building management systems, such as CCTV, access control, alarm and intercom systems to be combined to form a truly integrated security system. Advanced alarm handling and event linking automate alarm response and give the operator critical information in emergency situations. All devices are represented by icons, which provide real-time status so an operator can instantly determine the status of the complete facility. In addition, the Aegis™ advanced logging and report capabilities allow quick access to event history with the functionality of instant display of recorded video to be available soon.
