### ***Sielox™ Showcases Pinnacle™ Software Upgrades and Announces New Partner Solutions at ISC West.***

*New Integrated Graphical Mapping Features Unveiled.*

*Partnerships Highlight Sielox's Open Architecture Platform.*

Las Vegas, NV (March 28, 2007) – Sielox is delivering new solutions in access control technology with the introduction of a new graphical software enhancement for Pinnacle Access Control Systems being showcased this week at ISC West. Sielox is also announcing the foundation of technology partnerships with NuVision One Card Systems and KapLogic's Aegis™ Graphical Security Integration Software, in addition to building their own staff with new personnel.

“Our announcements at ISC West go a long way in advancing the value of a Pinnacle Access Control System, both in functionality and ROI,” said Sielox President and General Manager, Karen Evans. “Along with our own product developments and upgrades, Sielox is reaching out to related security technologies to help ensure that our

customers can supplement their access control systems with robust and purposeful feature sets.”

Pinnacle Integrated Graphical Mapping enables any device listed on Pinnacle’s device tree to be easily placed on a floor plan for monitoring and control. Optimized for ease of use in both the design and view modes, it features a direct tie to Pinnacle’s device tree that allows drag and drop functionality of devices from the tree into the map. The new feature will be available on Pinnacle 6.0, which is slated for release in the first quarter of 2007.

Collaboration with NuVision’s One Card System will provide richer functionality and improved efficiencies for patron accounting and physical access control. When the Pinnacle access control software is integrated with NuVision’s iAMECS Advanced one card system, the two technologies can share the same partitioned SQL Server data base for instantaneous information sharing, changes, updates and communication. In addition, ID card images, captured by iAMECS Advanced Video Pro technology, can be linked to the Pinnacle software.

For system integrators and security management looking to integrate their access control system with related security subsystems, Sielox is announcing their partnership with KapLogic’s Aegis integration software. This solution provides a seamlessly integrated network workstation and offers significant flexibility in system design, distributed processing and scalability.
