

# LRMB

## Mounting Bracket

The LRMB Mounting Bracket is specifically designed for use with the LR-911 high frequency reader. The LRMB has two swivel bracket heads that facilitate the aiming of the LR-911 via flexible up/down and side/side movement. The LRMB can be mounted in either a horizontal or vertical position allowing for maximum flexibility.

The LRMB is made of medium gauge steel, making it durable enough for any application. The baked enamel finish is a neutral putty color.
