Sielox™ Introduces X-LAN Network Connectivity at ASIS.

Simplifies Network Installations By Bridging Gap Between Ethernet And RS-485.

Las Vegas, NV (September 24, 2007) – Sielox is delivering new solutions in access control technology this week at ASIS with the introduction of their X-LAN Ethernet-to-RS-485 Converter. A compact and innovative tool to simplify network installations, the X-LAN Converter bridges the gap between the industry standard Ethernet and RS-485 networks.

“We are dedicated to offering our customers an off-the-shelf Ethernet networking solution that is both powerful and cost-effective,” said Sielox President and General Manager Karen Evans. “For installations with existing Ethernet network infrastructure, the X-LAN both reduces installation costs and eliminates the use of extra devices.”

With X-LAN, when devices are plugged in to the Ethernet, automatic device discovery is facilitated via Sielox Pinnacle LANLink™ Controller Properties. In addition, X-LAN does

not require a Main Controller and allows up to 16 Terminal Controllers per Ethernet connection. X-LAN is compatible with Pinnacle 6.x or later and works with AC-1500 and AC-1200 Sielox Controllers, with support for 16-bit and 8-bit controllers available soon.
