

Cincinnati Chooses Pinnacle™ Access Control Solution

From Sielox™ To Enhance Citizen Safety.

*Sielox Integrates Access Control Solution With Innovative Biometrics Technology
To Protect Sensitive Data*

Runnemede, NJ (March 7, 2006) – The safety of the population is the ultimate objective of security systems currently being put into place by cities across the country. That was the objective of the City of Cincinnati when they contracted with CityWatcher to install security cameras in highly trafficked urban areas. But collecting video data is only the beginning of the equation. The need to keep this sensitive information secure once it is collected becomes an issue of access control.

Cincinnati needed a higher level of control to assure that only specified employees could access recorded data. Together with VeriChip, a provider of Radio Frequency Identification (RFID) tag technology, they approached Sielox, now a subsidiary of L Q Corporation. Sielox is the developer of the Pinnacle Access Control System. "Sielox made the investment in time and resources to develop the customized programming and innovative technology that would work together with VeriChip's products," said Karen Evans, President and General Manager of Sielox. "Beginning with the Pinnacle Access Control Platform, Sielox engineers created the additional integration required for this highly specialized biometrics application."

The VeriChip RFID tags, which emit no signal but provide passive identification verification, are tiny microchips embedded beneath the skin. Two employees in Cincinnati have volunteered to have the new chips embedded enabling them access to the video data.

After the successful implementation of the system in Cincinnati, Sielox, CityWatcher and VeriChip have had further inquiries from several other cities, including New York, Los Angeles, Cleveland and Columbus. "We are looking forward to working with CityWatcher and VeriChip to continue delivering security solutions for additional municipalities," said Evans. William J. Fox, President and CEO of L Q Corporation added, "This successful collaboration will lead to a roll-out of this technology that will enhance the safety of all citizens. This type of innovation is consistent with the mission of the L Q group of companies."

Sielox (purchased from Checkpoint Systems, Inc. in 2005) is the primary business of L Q Corporation, which is engaged in the business of physical security and investigatory services. L Q's philosophy is to bring innovative solutions to the security needs of businesses and governments.

Sielox product offerings include the Pinnacle™ Access Control Solution, proximity cards and devices, readers and 32-bit controllers designed for professional physical security applications. SES offers a wide range of investigatory services including corporate investigations; forensic accounting; anti-money laundering; anti-counterfeiting and intellectual property protection; health and wellness consultancy; emergency preparedness and contingency planning; executive staffing solutions; and education and government security training services.

About VeriChip Corporation

VeriChip Corporation, headquartered in Delray Beach, Florida, develops, markets and sells radio frequency identification, or RFID, systems used to identify, locate and protect people and assets. VeriChip's goal is to become the leading provider of RFID systems for people in the healthcare industry. VeriChip sells passive RFID systems for identification purposes and active RFID system for local-area location and identification purposes. VeriChip recently began to market its VeriMed(TM) patient identification system which is used to rapidly and accurately identify people who arrive in an emergency room and are unable to communicate. VeriChip's VeriMed(TM) patient identification system uses the first human-implantable passive RFID microchip, the implantable VeriChip(TM), cleared for medical use in October 2004 by the United States Food and Drug Administration.

Safe Harbor Statement

This press release includes forward-looking statements intended to qualify for the safe harbor from liability established by the Private Securities Litigation Reform Act of 1995. These forward-looking statements generally can be identified by phrases such as the Company or its management "believes," "expects," "anticipates," "foresees," "forecasts," "estimates" or other words or phrases of similar import.
