

ThresholdEnterprise™

Access Control Software

- User-friendly graphical user interface
- Real-time alarm notification
- EventLink and image history
- Photo ID badging
- Third-party vendor integration

For high-end security management applications, ThresholdEnterprise™ is packed with in-demand features that enhance security, integrate third-party solutions, improve productivity and facilitate future expansion. Developed by Checkpoint Systems, a leader in access control solutions and a Microsoft® Certified Partner, ThresholdEnterprise provides a feature-rich software package with a graphical user interface for exceptional ease of use.

ThresholdEnterprise uses Sybase SQL Anywhere® and is compatible with Microsoft Windows NT® and Microsoft Windows® 2000.

Combine power with easy operation

- Permissions that restrict operator access let you secure operations with the highest degree of detail.
- Integrated image capture and badging are so easy that even a novice operator can execute these capabilities.

EventLink provides a snapshot of events

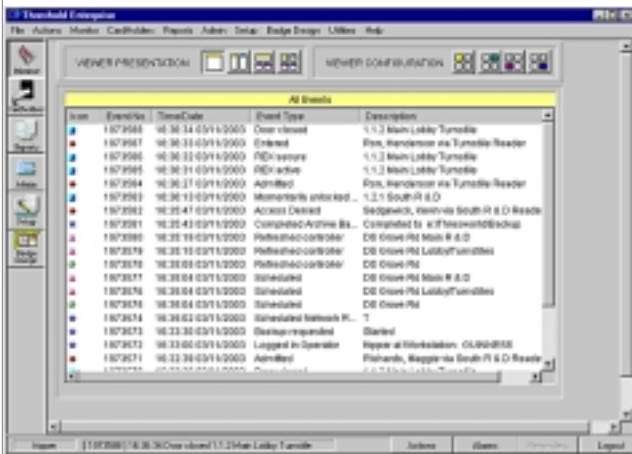

- Display card reader event information along with a cardholder's image.
- Filtering lets you tailor EventLink to provide the information you need.
- EventLink provides both current information and an image history of past events.

Respond faster with real-time event details

- Breakthrough alarm box alerts operator enabling timely response.
- Alarm messages can be specified by time zone.

Customized software solutions

- ActiveX components provide a link to a multitude of business and security solutions.
- Customize reports to see only the information you need.
- Automatically create backups, messaging and time-sensitive reminders for consistent, reliable performance.
