

FOR IMMEDIATE RELEASE

Sielox™ Introduces Latest Controller – 1500 Series

New 32-bit controller offers unparalleled modularity

Las Vegas, NV (April 2, 2008) – Sielox, a leading provider of access control solutions, is pleased to announce the introduction of its newest controller – the 1500 Series. Providing unmatched modularity, the 32-bit 1500 controller comes with a power supply/UPS module that keeps the unit up and running and assures continuous operations in 24/7 environments.

The 1500 Controller is an access control panel that controls from two doors up to 16 doors in the large enclosure configuration or from two up to four doors in the small enclosure configuration. The 1500 controller includes the Terminal Controller with key features including: two door, two request to exit sensors, two door contacts and door locks; 50,000 card holder database; 10,000 off-line events; 256 access levels; 64 time zones; four general purposed inputs; four general outputs; real-time clock; and Lithium battery back-up. The communication configurations for the 1500 include Ethernet (LANLink™ 1500) or RS485 (AC-1500). Used in conjunction with the X-LAN, the 1500 can control up to 32 doors with a single Ethernet connection. The 1500 controller includes a built-in power regulator/UPS/Battery charge module that ensures uninterrupted performance in the event of a power failure.

Terminal Controller modules (TCs) manage each set of two doors. The terminal controller modules store each cardholder and reader configuration until the command center server is updated. The terminal controller modules maintain access control even if the command center goes down, managing inputs, outputs, and card readers, and locking and unlocking doors until the command center is restored.

“Built upon our exceptional heritage in access control, we pride ourselves on working with our dealers and their end-users to develop product solutions that are tailored to their specific industry needs. Many of our customers’ environments are operational 24 hours a days, seven days a week,” said Karen Evans, President and General Manager of Sielox. “They can’t afford to have access points compromised, and they know they can count on Sielox for uncompromising reliability.”

In addition to its new product innovations, Sielox has developed software that is compatible with its 8-bit and 16-bit controllers, providing its end-users with the flexibility to upgrade their installations without replacing legacy controllers.

About Sielox, Inc.

Sielox, Inc. markets physical security and critical strategic security solutions through its subsidiaries which are Sielox, LLC (Sielox™) and Costar Video Systems, Inc. Sielox™ product offerings include the Pinnacle™ access control software solution, proximity cards and devices, readers and 32-bit controllers designed for professional physical security applications. Costar offers a wide selection of video surveillance equipment including PTZ dome systems, fixed cameras, monitors, processing devices, and analog and digital recorders for general-purpose applications.
